

Date	4 December 2019
Event name	Graeducation /Greening Seminar, Digitization and Entrepreneurship: Empowering Greek Vocational Education
Event description	Greening seminar, Digitization and Entrepreneurship: Empowering Greek Vocational Education. Both the German and Greek vocational education systems face the challenge of adapting the necessary skills to modern labor markets. Climate protection is one of the aspects that leads to new skills requirements, especially in the technical professions. Modern employment biographies require personal skills, which can be described as "business skills". Digitization is seen as an issue, which is causing changes in many technologies and modifying to a certain extent the teaching and learning processes, in such a way as to require both teachers and students digital skills and a different view of their roles, teacher and trainee. As part of the GRÆDUCATION project, a seminar idea was developed that takes into account these new requirements and was tested in Athens in the first week of December 2019. The seminar included "green" business modules as well as interactive skills modules in the areas of employability and entrepreneurship. The new skills acquired through the seminar will have to be incorporated into various Greek educational programs, and their implementation will be evaluated by the Greek-German project team.
Location	National Technical University of Athens (NTUA), Athens, Greece
SOLBIO-REV participants	NTUA
Nature of participation	Banner & Presentation
Number of attendees	20-30
Feedback & added-value	The participation of the SOLBIO-REV project in the greening seminar, has a positive impact on the dissemination of the project. More specifically, the following aspects summarize the feedback received: • incorporation into various Greek educational programs • Empowering Greek Vocational Education • leading to new skills requirements, especially in the technical professions
